

# Political Automation

---

An Introduction to AI in Government  
and its Impact on Citizens

Eduardo Albrecht  
Oxford University Press  
Aug 2024

---

## Let us start with a wide-angle anthropological view:

- 1. AI has changed the nature of governance**
- 2. *Political machines* have replaced human bureaucrats**
- 3. These machines are not confined to government offices but are everywhere**

**Some are in  
obvious  
places**

**Some in less  
obvious  
places**

**Most you carry  
with you**

---

**Political machines depend on three things:**

**01**

---

**Informatized  
Bodies**

**02**

---

**Mechanics of  
Expression**

**03**

---

**Digitized  
Biographies**

## **Informatized physical bodies**

## Mechanics of Human Expression

## Digitized Social Biographies

## 3 years fieldwork with digital rights groups

- California: Oakland Privacy and NorCal Resist
- Europe: Access Now and European Digital Rights
- Africa: African Law and Technology Institute and Penplusbytes
- India: Digital Futures Lab and Centre for Internet and Society
- Kenya: Africa Check and Safe Online Women

---

## Some results from interviews that are similar across geographies:

People are unevenly aware of deployment of political machines

People are unevenly impacted (citizens vs irregular border-crossers)

Digital identities being created without consent (psychologically less autonomous)

Few avenues for governance (often resort to legal whack a mole)

# Case Study #ProtectNotSurveil

AI tools have disproportionate impact on already marginalized communities

## Reliance on Problematic Origin Data

- Interoperability of data streams across borders
- Includes data collected in locations lacking human rights frameworks

## Embedding of Cultural Stereotypes

- Pattern of over-targeting based on deductive logics
- Criminalization of certain nationalities, professions, and education types

## Inaccurate Automatic Risk Assessment

- Decisions based on poor predictive performance
- Leads to the exclusion of people who are legally entitled to rights

---

# “Automation Fatigue” sets in

## UNINTENTIONAL

- Unreasonable burden of proof on the individual
- Guilty until proven innocent
- Feeling of helplessness around machines’ “authority”

## INTENTIONAL

- Deliberate complexification of how decisions are made
- Use of technical jargon to obscure reality
- Private vendors seek to protect proprietary models

An abstract background on the left side of the slide. It features horizontal lines in shades of teal and blue. A trail of small, bright white and blue particles starts from the bottom left and curves upwards and to the right, resembling a data stream or a particle path. The overall color palette is dark blue and teal.

**Case Study:**

**Decryption for  
Security**

INFORMATION ENVIRONMENT: POLARIZED

**Private online communications are automatically monitored**

**Risk assessed across variety of vectors**

## Respondents to survey

**66%**

Do not want online communications to be monitored for suspicious content

**56%**

Consider online anonymity crucial to activism and political organization

**2%**

Believe dycrption measures would effectively provide protection from harm online

**Across all geographies, we find that political machines:**

**Often tested or deployed on more vulnerable populations, before being deployed on wider sections**

**Citizens have few tools to stop the “mission creep”. Theory:**

**There seems to be an incompatibility between institutions created to govern human bureaucrats and institutions needed to govern political machines**

## **Human Bureaucrats**

Based on Individual Agency

Defend Unalienable Rights

Deliberative Environment Print Media

Representative Democracy to be Informed

## **Political Machines**

Based on Group Interests

Promote Positive Rights

Deliberative Environment Social Media

Direct Democracy to be Programmed

# A Third House?

1. House of Lords
2. House of Commons
3. A Chamber for our Data Doubles?

1. A virtual chamber that legislates exclusively on AI in government decision-making
2. Citizens can see all data collected on them and how it is used
3. Based on the principles of direct democracy, mediates citizen access and input to political machines on a rolling basis
4. Citizens may green light deployment of political machines *or* use sliding scales to foreground ethical values they want to see prioritized
5. Ordinary people will be called upon to become citizen-philosophers as they debate the type of society they want their machines to nudge toward
6. The entirety of civil society will become the fourth pillar of government, complimenting the executive, legislative, and judicial
